PROFILE

I am frontend web developer doing all things creative to make the web a more unique and awesome place.

PROJECTS

Movie Website

Description

- Designed and developed a dynamic movie website to provide users with information about movies, including details such as plot summaries, cast, and ratings.

Key Responsibilities:

- Created an intuitive and responsive user interface to enhance the user experience.
- Utilized the debounce technique to optimize API requests, reducing unnecessary load on the server and providing quicker search results.
- Integrated with a movie database API (e.g., The Movie Database API) to fetch movie data.
- Implemented features like search functionality, movie listings, and detailed movie pages.
- Utilized state management (React Context) to efficiently manage and share application data.
- Ensured the website's responsiveness across various devices and browsers.

Weather-app

Description:

- Developed a weather forecasting application using React.js to provide users with real-time weather information.

Key Responsibilities:

- Created an intuitive and responsive user interface to enhance the user experience.
- Integrated with a third-party weather API (OpenWeatherMap) to fetch weather data.
- Utilized the debounce technique to optimize API requests, reducing unnecessary load on the server and providing quicker search results.
- Utilized asynchronous programming techniques (Promises or async/await) to handle API requests.
